

# FIAVis App Commander

## Highlights

- Optimized visualization for mobile devices / tablets / touch PCs
- Native app available for iOS (6.1 or newer), Android (2.3.3 or newer), MS Windows (x86 or x64)
- App can be downloaded for free from the iTunes/ Google Play stores
- WYSIWYG design editor (Windows) to create the visualization projects
- Different views (screen sizes, vertical/horizontal format) can be managed within the same project
- Available controls: value displays, state displays, switches, push buttons, sliders, bar displays, picture changers, web views and different input screens
- 400 integrated symbols, own symbols can be imported
- 10 ready to use color schemes, own color schemes can be defined
- Immediate test run of the created visualization in the Windows designer
- Configurable password protection for all visualization controls and pages
- Configurable password protection for app settings and network access
- Easy licencing based on the FIAVis server or the KNX SPS device

## Fields of application

Available for iOS, Android and Windows: the FIAVis App Commander offers a flexible Smartphone/Tablet user interface for the EIB/KNX system.

Place and configure your controls with a comfortable WYSIWYG editor, the FIAVis App Designer. The 400 included graphical symbols ensure a modern design, own symbols and color schemes are usable. Test your project by just one mouse click, and transfer it as easily into the App Server (KNX SPS / FIAVis). All mobile devices will synchronize their views automatically when connecting to the server. Unauthorized access can be prevented by the integrated password protection. The optimized network protocol guarantees fast reaction times in combination with minimized data transfer. The App server can manage different visualization projects at the same time.

## Licenses

- Available for FIAVis Base Server and KNX SPS
- The licenses control the number of concurrent mobile connections, no individual licences for your mobile devices required
